PATHWAYS TO MEDICAID COVERAGE FOR CHILDREN AND YOUTH WITH SPECIAL HEALTH CARE NEEDS

Medicaid is a public benefit program that pays for health care and related services for vulnerable populations who meet certain federal and state eligibility criteria. For children and youth with special health care needs (CYSHCN), there are four main pathways to Medicaid coverage.

**FAMILIES**
Another pathway is eligibility based on income and functional level of disability. For low-income families in most states, a child receiving supplemental security income (SSI) is eligible for Medicaid. For middle-income families of CYSHCN with high health-related expenses, states with Medicaid buy-in programs allow access to Medicaid to supplement private insurance or for primary coverage.

**Payers & Policymakers**
About 48% of CYSHCN are insured fully or partially by public insurance. The most common pathway to Medicaid coverage is eligibility based on income, not health status. Regardless of how a child comes to be enrolled, Medicaid is a critically important source of adequate and affordable health care coverage for CYSHCN.

**Providers**
All children in foster care are eligible for Medicaid. Children in foster care are vulnerable in many ways and should be considered important members of the population of CYSHCN because of their increased risk for and prevalence of poor physical, developmental and mental health status and outcomes.
